

For Businesses

Apex Energy solar and battery storage for business offers a highly attractive return on investment with almost zero upfront costs.

In most instances, investing in solar for larger commercial type applications, including businesses, schools, universities and government buildings, means that your electricity bill can be replaced by paying off a solar system asset.

Investing in Solar Electricity money is dead money. Instead, you could be putting that quarterly bill towards paying down a depreciating asset and have free electricity in as little as a few years. Alternatively, you could purchase the solar system outright and utilise the instant asset write-off.

Designed for Business We have the solar electricity solution to meet all your business's power needs with a comprehensive renewable energy system that includes high-quality components, a robust inverter, brand-name solar modules, reliable battery storage, and a fully accredited installation team backed by ISO-certified processes and first-class safety.

Our team can design a system and create a proposal for your business tailored to your current and expected energy consumption, time of use, system size, location and unit energy costs.

Boost Your Sustainability Credentials A commercial solar system demonstrates your commitment to renewable energy and sustainability. The installation of solar provides the next step in becoming a more sustainable and responsible business.

Energy Stability & Security The energy generated by a commercial solar system is first consumed by the building. This provides a layer of energy security, as the power for the building is generated onsite instead of relying on an uncertain grid network.

Warranty & Workmanship For peace-of-mind, your system will feature high-quality solar panels and inverters which feature ten-year minimum product warranties. Our workmanship is also guaranteed for five years.

In-depth Monitoring & Analysis We provide all of our commercial solar systems with in-depth monitoring as standard, so that you can adapt your energy consumption to better suit your solar generation.

Maintenance & Servicing Our optional comprehensive maintenance and service program means your system will run worry free for years. Our monitoring software alerts Apex Energy to any issues, enabling us to fix the problem – often before you notice there is one.
